Limitations

- All results depend on the completeness and accuracy of ingested sources; absence of data is not evidence of absence.
- Relationships reflect recorded associations. They do not by themselves establish intent, causation, control or wrongdoing.
- Analytical signals are outputs of deterministic rules and graph mathematics. They are prompts for review, not findings.
- Entity resolution is deterministic but imperfect: unmerged duplicates and incorrect merges are both possible.
- Graph views and path searches are windowed and fan-out limited; truncated searches may omit connections.
